

JOHN ANDREW BORABO

Bellefort Estates San Miguel II Molino IV | johnandrewborabo44@gmail.com | 09926875483

SUMMARY

Computer Science graduate specializing in Machine Learning, with hands-on experience across the ML pipeline — data preprocessing, model training, and evaluation — plus full-stack development skills for shipping AI-driven applications end to end. Recently completed a Machine Learning Engineer internship at Metrobank, collaborating with cross-functional teams in an agile environment. Seeking an AI/ML Software role to apply strong fundamentals in Python, modern web technologies, and applied ML to real-world problems.

EXPERIENCE

Freelance Software Developer — Self-Employed 2024 – Present

- Deliver custom commissioned software work for online clients end to end, from requirements gathering through deployment.
- Design and build responsive websites and front ends using React, HTML5, CSS3, Tailwind CSS, and Bootstrap.
- Develop games and interactive applications, handling both gameplay logic and UI/front-end implementation.
- Integrate backend services and APIs (Node.js, Express.js, Firebase) and manage client communication and revisions independently across concurrent projects.

Machine Learning Engineer Intern — Metrobank (Metropolitan Bank & Trust Company) Apr 2026 – Jun 2026

- Prepared, cleaned, and validated datasets to support reliable, production-ready machine learning workflows.
- Supported model training, evaluation, and iterative experimentation using Python-based ML tools and libraries.
- Analyzed model performance metrics and documented findings to guide ongoing improvement decisions.
- Collaborated with developers, analysts, and mentors in an agile environment, authoring documentation and presentations to keep cross-functional teams aligned.

PROJECTS

AI Career Path Recommendation System — ISEAC 2025 Hackathon Jan 2025

- Designed an AI-driven recommendation system that guides users toward suitable career paths, combining full-stack web development with applied machine learning to automate a judgment-intensive decision task.
- Built and integrated the application's API layer to connect the recommendation logic to a working front end.

Coffee Leaf Disease Detection Model — Undergraduate Research Jun 2026

- Built a machine learning model to identify coffee leaf diseases from image data, applying data preprocessing and rigorous model evaluation techniques.

SKILLS

AI & Machine Learning: Prompt Fundamentals, Data Preprocessing, Model Training & Evaluation, NLP-adjacent Application Development, Applied ML for Decision Automation

Programming & APIs: Python, Java, JavaScript, TypeScript, API Integration, Postman

Web & Automation Stack: React, Node.js, Express.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Firebase

Databases & Tools: MySQL, MongoDB, Firebase Firestore, Git, GitHub, XAMPP

Working Style: Logical and structured thinker, strong attention to detail, fluent written and verbal English communication, quick to pick up new low-code/no-code and AI tooling ecosystems

EDUCATION

BS in Computer Science — Specialized in Machine Learning, National University – Dasmariñas 2022 – 2026

- Relevant coursework: Artificial Intelligence, Machine Learning, Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Software Engineering.

ADDITIONAL INFORMATION

- Certifications: Git & GitHub (2025), JS Object-Oriented Programming (2025), Blockchain Basics (2024), DICT Python Programming (2022), IT Specialist – Software Development, Certiport (2025).
- Languages: English (Fluent), Filipino (Native).
- Awards/Activities: ISEAC 2025 Hackathon – AI Career Path Recommendation Project; open-source contributions on GitHub.
